Dear Mr. Farina,

I enjoyed speaking with you yesterday. As you would expect, EPA does not get involved in vendor communications with Permittees, as this might give the impression that our agency endorses one vendor over another. As a federal governmental agency, neither EPA nor its programs can endorse any products or services.

You are free to contact Merrimack Station directly. The contact information is public information, included on several public documents issued by EPA and found on our website at:

Subject: ZVI Technology for Selenium management

Thank you for your call yesterday and discussing with me the advanced technology offered by Liberty Hydro for managing selenium at steam powered power plants.

I understand that the Merrimack New Hampshire facility did not go to zero liquid discharge and as such are sending water to the POTW. Based on our discussion our ZVI technology may be appropriate to help them with the balance of the water rather than sending the water to the POTW.

If you send me a contact or if you prefer, you can send my contact information to Merrimack so that we may explore helping them meet their effluent goals. Our team would set up a conference call followed by a visit to evaluate the effluent so we can develop a specific solution.

Thank you in advance for your help. If you have any questions please do not hesitate to contact me directly.
